# Test Centre

The IPSol Energy Centre of Excellence houses the UK's first fully accredited test-house for IEC certification of solar panels. The test centre offers many other complimentary services:

### Power Measurement and Pre-Certification

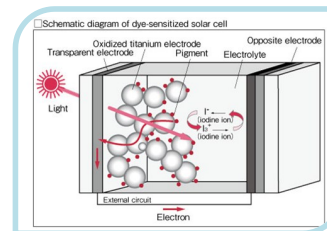

- Performance measurement
- Cell Characterisation
- Diode Tests
- UV degradation
- Environmental tests
- System measurement

### Research & Development

IPSol Energy supports the research and development work in the Centre for Renewable Energy Systems Technology (CREST) within the University of Loughborough, and can arrange for specific research to be undertaken.

### IEC & MCS certification

IPSol Energy has been established to meet the growing demand for testing services worldwide. We meet this demand without the current queues. IEC certification is a pre-requisite for feed in tariffs (FiT's) and a pre-cursor to the Microgeneration Certification Scheme (MCS). We are working with BRE Global to extend our services to cover all aspects of the MCS.

See our consultancy leaflet for other services
